

ESG CONSULTING SERVICES

Our team of climate change and sustainability experts helps you measure and analyze impacts, develop strategies, and report progress. In doing so, we help you develop competitive advantages, manage risks, and build a positive brand image through clear, correct, and meaningful sustainability work.

CARBON FOOTPRINT ACCOUNTING

To accompany our carbon footprint online reporting service, our consultants can assist in developing your carbon footprint accounting. Our consultants are experts in the Greenhouse Gas Protocol and Corporate Accounting and Reporting Standard and can assist in mapping emission sources and choosing the correct emission factors.

We also offer SCOPE 3 MAPPING, which is necessary to ensure a complete overview of your climate impact. Our team can also help companies track their progress over time and visualize and communicate their results.

CLIMATE-RELATED RISKS AND OPPORTUNITIES (TCFD)

We offer complete support in mapping and analyzing climate-related risks and opportunities and can assist in reporting in accordance to the recommendations by the Task Force on Climate-related Financial Disclosures (TCFD). Our team is well versed in the tools to develop scenario analyses and financial impact assessments, which will bring your risk management to the next level.

We also help companies provide accurate information to investors and other financial stakeholders in line with TCFD.

SCIENCE BASED TARGETS

We assist companies in setting emission reduction targets in line with the Paris Agreement and the established science on which it is based. Science-based targets allow companies to create their own GHG emission scenarios in line with their "fair share" of the global emission budget.

Our team helps you calculate and demonstrate how your company should reduce emissions according to science-based methodologies. We are the only Nordic CDP accredited SBT partner, which means we are approved to develop emission reduction targets in line with SBTi requirements.

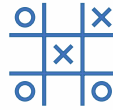

GRI REPORTING

We offer support in the process of developing thorough, transparent, and engaging sustainability reporting in accordance with the Global Reporting Initiative (GRI). Our team of advisors are GRI-certified, and can help conduct stakeholder dialogues, materiality analyses, and develop the different report elements.

We also offer support in other types of ESG reporting, such as Dow Jones Sustainability Index.

SCIENCE
BASED
TARGETS

ESG STRATEGY DEVELOPMENT

Our expert consultants support your company in developing sustainability- and climate strategies to structure your company's approach to reducing its ESG footprint.

It is critical that a sustainability strategy is based on a robust knowledge basis about your company's most material ESG areas and takes into consideration the unique challenges ahead in the transition to a low-carbon economy.

CDP REPORTING

We assist in the process of reporting to the CDP (Carbon Disclosure Project), which asks companies to report their emissions, their climate-related governance, risk management, targets, and engagement strategies.

Since 2008 we have encouraged and assisted clients reporting to the CDP, with an exceptional track record of high achieving clients. We are the only CDP accredited partner in the Nordics.

LOW-CARBON TRANSITION PLANNING

Our expert consultants provide advanced analysis to map your path in the low-carbon transition by identifying emission reduction measures and creating your carbon budget. Using our low-carbon planning tool we provide robust inputs to your climate strategy.

Our team can help you model your carbon budget, visualize the effect of emission reduction initiatives, and measure progress towards a 2°C or 1,5°C scenario.
